Connections

Operation mechanism

It is transmitted ON/OFF signal with a magnetic coupling of coils.
The coil of transmission part and proximity sensor is coupled electronically, the induced current is generated at closed-loop of transmission part influenced by a magnetic field from proximity sensor coil when the switch of sensing part is ON.

Feature data

Please note the proximity sensor detects the surrounding cover of the sensing side of transmission coupler even the connection switch is OFF in sensing part.

Caution for using

1. This equipment shall not be used outdoors or beyond specified temperature range.
2. Do not apply over tensile strength of cord. (ø 5: 50N max.)
3. Do not use the same conduit with cord of this unit and electric power line or power line.
4. Do not put overload to tighten nut, please use the supplied washer for tightening.

- Note1) Allowable tightening torque of a nut may be different by the distance from the head.
For allowable tightening torque and the range of front and rear parts, refer to [Table 1] and above [Picture 1] respectively. The rear part includes a nut on the head side (see above [Picture 1]). Please apply a tightening torque of the front part when the nut on the front is located in the front part.
- Note2) The allowable tightening torque denotes a torque value when using a provided washer as above [Picture 2].
5. Please make wire short as much as possible in order to avoid noise.
 6. Be sure to cable as indicated specification on this product. If use wrong cable or bended cable, it shall not maintain the water-proof.
 7. It is available to extend to max. 5m cable with thicker than 0.3mm² diameter.
 8. It may cause malfunction when putting transceiver near by proximity sensor and the cable.
 9. Contact switch at the detecting part shouldn't have a leakage current when it is off.
 10. Contact switch (Limit switch or Micro switch etc.) should be max. 300mΩ of contact resistant and min. 10MΩ of open resistant.
 11. It may cause malfunction if metal dust etc. is put on the detecting surface since using inductive proximity sensor as output part.
 12. It is available to transmit a signal even though there is the material like plastic or mirror etc.
 13. Please set it up in A area of below chart when installing on a body of revolution.

※It may cause malfunction if above instructions are not followed.
