Caution for using

- Installation**
 - This unit is consisted of precision components. Therefore please treat this product carefully.
 - When you install this unit, if eccentricity and deflection angle are larger, it may shorten the life cycle of this unit.
 - Environment**
 - Please do not use this unit with below environment, it results in malfunction.
 - Place where this unit or component may be damaged by strong vibration or impact.
 - Place where there are lots of flammable or corrosive gases.
 - Place where strong magnet field or electric noise are occurred.
 - Place where there is beyond of rating temperature or humidity
 - Place where strong acids or alkali near by.
 - Place where there is the direct ray of the sun.
 - Vibration and Impact**
 - When the strong impact loads on this unit, the error pulse may occur as if the slit is revolving.
 - Therefore please fix bracket firmly when mount this unit, because Rotary encoder with high resolution can be easily affected by impact.
 - Wire connection**
 - Do not apply a tensile strength in excess of 30N to the cable.
 - When a high voltage or power line pass near by the encoder cable, be sure to wire the encoder cable in separated conduit to prevent malfunction.
 - When extend the cable, please use it after checking the cable and response frequency due to increment of residual voltage or distortion of waveform can be easily occurred. (Preferable shortest distance for operating)
 - Shield wire must be connected to F.G. terminal.
